

Project Report

The Restaurant Site

By

Sudhanshu Nimje (RA1711003011318)

Manvi Singh Chandel (RA1711003011471)

Introduction: -

For our Web programming project we have created a Restaurant website of Adare in which people can make reservations for dining. It requires the user to register on the site and create an account, by becoming a member the users can make booking multiple times.

In the home page we have options of Menu, Chef's, Contact and Blog on display.

Through Menu page the user can select what they would like to have from a variety of burgers, sandwiches, pastas and cheese fries.

Under that the map is displayed for the exact location so users can easily locate the restaurant.

There are also details mentioned about the talented chef's working here. About their experience and years of service under the chef's column.

Through the blog page users can read about certain recipes which are quick and easy to make, some of which are right from our own chef's kitchen.

Finally, the contact page through which people can contact the management if they have any queries.

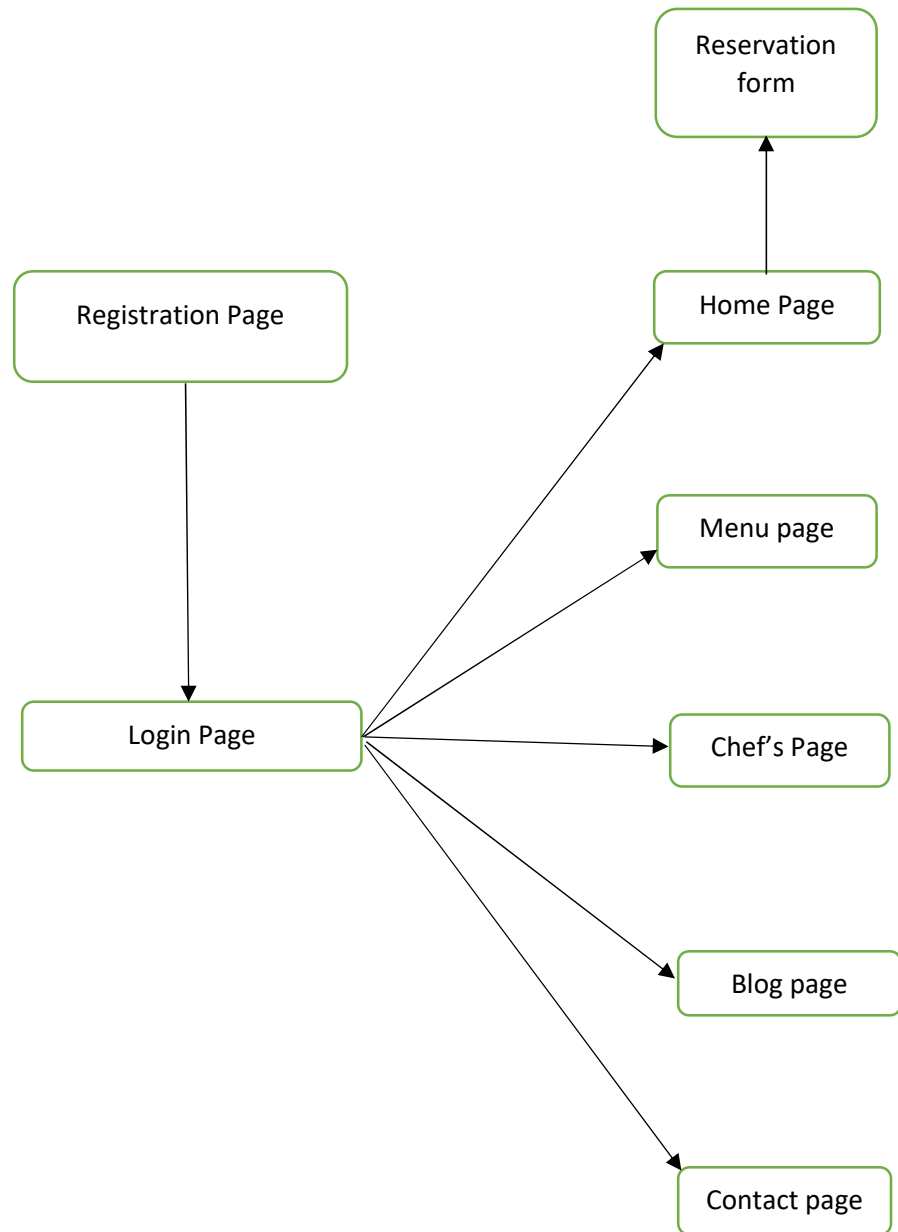

Under this there is also a feedback form for the users to share their experience, suggestions and if they had any issue regarding the service they received.

For the feedback form the various factors to rate include: Food experience, Staff support, Cleanliness, overall service quality etc.

System Requirement

- 1) Browser (Chrome is used here)
- 2) Laptop/PC
- 3) Code Editor (VS code used here)
- 4) Local server (XAMPP for Apache and mySQL)

System Architecture

Database connectivity

Language used:-PHP and MySQL

Title: Registration System Php and Mysql

For the Registration Form:-

1)Initializing variables such as username, email id and password.

2) Connecting to database and receiving all input values.

Checking through Sql queries: -

3) Validating the form:-i)Confirming password (the two passwords need to match If not error message is shown)

ii)Validating other details (username, email id) and making sure they do not exist already.

iii)If user already exists, error message is shown.

4) If none of the errors are displayed the user can finally register.

5)After registration the message is displayed saying the user is logged in.

6)Also there is another link (Sign in) for directly logging if you're already a member.

For Login Page: -

1) Enter the username and password if you're already a member.

2) If any of the two are incorrect, error message is displayed.

3) If both are correct user is able to login.

4) Also, if you are a first-time user and have not registered yet you can use the link below the password label for signing up.

5) This link will connect you to the registration page.

Server.php

```
<?php
session_start();
// initializing variables
$username = "";
```

```

$email      = "";
$errors = array();
// connect to the database
$db = mysqli_connect('localhost', 'root', '', 'registration');
// REGISTER USER
if (isset($_POST['reg_user'])) {
    // receive all input values from the form
    $username = mysqli_real_escape_string($db, $_POST['username']);
    $email = mysqli_real_escape_string($db, $_POST['email']);
    $password_1 = mysqli_real_escape_string($db, $_POST['password_1']);
    $password_2 = mysqli_real_escape_string($db, $_POST['password_2']);

    // form validation: ensure that the form is correctly filled ...
    // by adding (array_push()) corresponding error unto $errors array
    if (empty($username)) { array_push($errors, "Username is required"); }
    if (empty($email)) { array_push($errors, "Email is required"); }
    if (empty($password_1)) { array_push($errors, "Password is required"); }
    if ($password_1 != $password_2) {
        array_push($errors, "The two passwords do not match");
    }

    // first check the database to make sure
    // a user does not already exist with the same username and/or email
    $user_check_query = "SELECT * FROM users WHERE username='$username' OR email='$email' LIMIT 1";
    $result = mysqli_query($db, $user_check_query);
    $user = mysqli_fetch_assoc($result);

    if ($user) { // if user exists
        if ($user['username'] === $username) {
            array_push($errors, "Username already exists");
        }
        if ($user['email'] === $email) {
            array_push($errors, "email already exists");
        }
    }

    // Finally, register user if there are no errors in the form
    if (count($errors) == 0) {
        $password = md5($password_1);//encrypt the password before saving in the database
    }
}

```

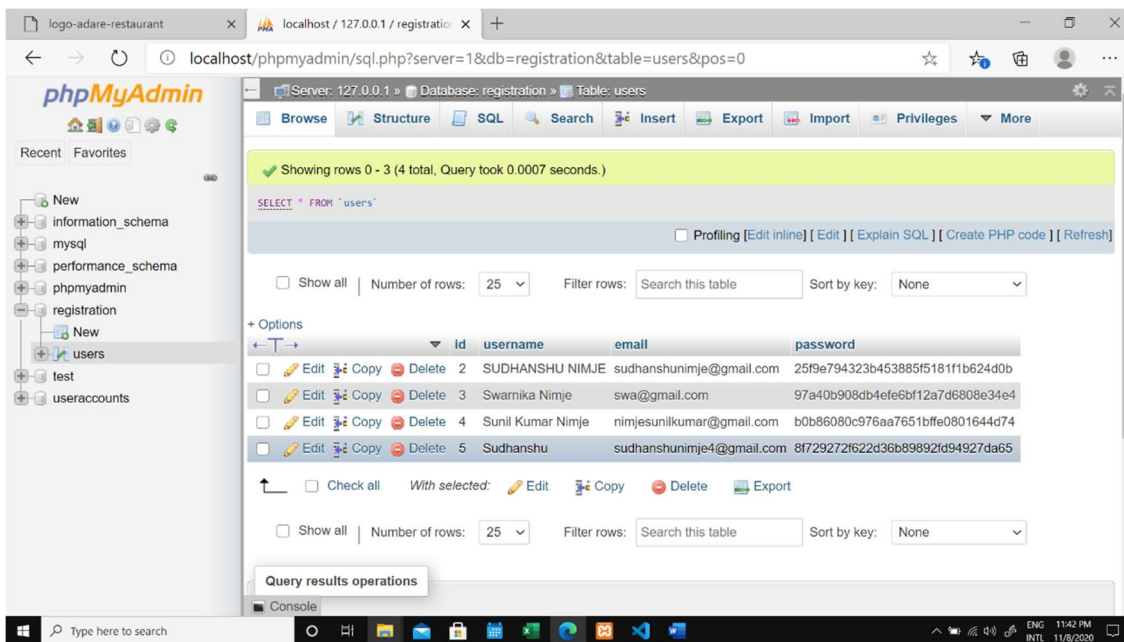

```

$query = "INSERT INTO users (username, email, password)
        VALUES('$username', '$email', '$password')";
mysqli_query($db, $query);
$_SESSION['username'] = $username;
$_SESSION['success'] = "You are now logged in";
header('location: index.php');
}
}
// LOGIN USER
if (isset($_POST['login_user'])) {
    $username = mysqli_real_escape_string($db, $_POST['username']);
    $password = mysqli_real_escape_string($db, $_POST['password']);

    if (empty($username)) {
        array_push($errors, "Username is required");
    }
    if (empty($password)) {
        array_push($errors, "Password is required");
    }

    if (count($errors) == 0) {
        $password = md5($password);
        $query = "SELECT * FROM users WHERE username='$username' AND password='$password'";
        $results = mysqli_query($db, $query);
        if (mysqli_num_rows($results) == 1) {
            $_SESSION['username'] = $username;
            $_SESSION['success'] = "You are now logged in";
            header('location: index.php');
        }else {
            array_push($errors, "Wrong username/password combination");
        }
    }
}
?>

```

<?php endif ?>
```

Home page

Language used: - HTML5, CSS, JavaScript, PHP.

- Home Page contains the highly interactive interface where you can find the location of the Restaurant and make reservation.
- Home also contains media element (video) which plays as soon as you login.
- PHP is also implemented to fetch the name of the user which is displayed in top right corner and the logout button to get out of session.

HTML code

Index.php

```
<?php
    session_start();

    if (!isset($_SESSION['username'])) {
        $_SESSION['msg'] = "You must log in first";
        header('location: login.php');
    }
    if (isset($_GET['logout'])) {
        session_destroy();
        unset($_SESSION['username']);
        header("location: login.php");
    }
?>

Conclusion & Future Work

So through this project which tries to provide an interactive platform to the users by not only giving them a medium to make food ordering/making reservations easy, but also to add suggestions of their own. Through this restaurant site it is more convenient for customers to choose what they would like to have from the variety of cuisine. Since the map is also provided in the portal, customers can easily find the location to the restaurant. Infact there is info given about the chefs who work in the restaurant so customer's can have faith in the place they are choosing to have their meals in and hence have a good time. Lastly through feedback/suggestions form customers can not just share their experience but also give an idea on how the restaurant can make changes in their plan to make their services better.

The further changes that can be made to make this project even better are the following:- The platform can be more interactive by providing customer support, we can include options like customers demand for a provate table or a booking for a more recluse section for a private party. The login can be more secure, registration page can provide auto suggest for username. Further features may also include one click registration using Facebook account or Gmail account.
